

# A Business Model For Information Protection An Introduction

By Mr. Derek Oliver, Chair of the Development Team

In 2008, ISACA entered into a formal agreement with the University of Southern California (USA) Marshall School of Business Institute for Critical Information Infrastructure Protection to continue the development of its Systemic Security Management Model. The Business Model for Information Security takes a business oriented approach to managing information security, building on the foundational concepts developed by the Institute. It utilizes systems thinking to clarify complex relationships within the enterprise, and thus to more effectively manage security.

This session introduces the model and its core concepts to organisations, particularly to:

- Senior business executives;
- Information security managers;
- Those who have responsibility for managing business risk;
- Individuals who have responsibility for the design, implementation, monitoring and improvement of an information security management system.

## Join ISACA Now!

Being a member of ISACA links you to an organization with a strong reputation and a 40-year history of success and leadership. Membership gives you access to a vast array of knowledge and benefits, as well as the opportunity to contribute directly to advancing the profession and developing its body of knowledge.

1st June 2009  
Radisson SAS Bay Point Resort  
St. Julians
